

SRAVANI YADAVALLI

Orlando, FL | 6562125458 | sravaniyadavalli22@gmail.com | [linkedin.com/in/sravaniyadavalli](https://www.linkedin.com/in/sravaniyadavalli)

PROFESSIONAL SUMMARY

Senior Software Engineer with 5.6 years of experience building scalable full-stack enterprise applications, distributed cloud-native systems, and consumer-facing platforms using Java, Angular, Spring Boot, AWS, and REST APIs. Experienced in developing secure backend services, workflow orchestration systems, and responsive frontend applications supporting banking operations and enterprise digital platforms.

EDUCATION

University of South Florida

Master of Science in Computer Systems Analysis

Tampa, FL

Aug 2023 – May 2025

Gudlavalleru Engineering College

Bachelor of Technology in Computer Science and Engineering

Gudlavalleru, India

Jun 2015 – May 2019

EXPERIENCE

Senior Software Developer

Community Dreams Foundation

Aug 2025 – Present

Remote

- Architected scalable financial applications using Java, Spring Boot, React, PostgreSQL, and REST APIs improving operational workflow efficiency by 34% across distributed enterprise banking and automation platforms.
- Leveraged Claude Code agents and AI-assisted development workflows to accelerate feature implementation, automate code generation, and streamline backend engineering activities reducing development turnaround time.
- Utilized Claude Code commands for debugging distributed microservices, optimizing API performance, and generating maintainable test cases improving backend service by 24% across scalable production systems.
- Implemented CI/CD pipelines, automated testing frameworks using Jenkins, Docker, and Kubernetes improving software release reliability by 25% while supporting scalable production systems.
- Applied Gemini and Claude Code for requirement analysis, technical documentation generation, refactoring legacy modules, and improving developer productivity across Agile enterprise software delivery initiatives.
- Collaborated with product managers, architects, and engineering teams to troubleshoot production issues, review scalable software designs, and support maintainable cloud-native application delivery workflows.

Full Stack Developer

Capgemini

Jul 2022 – Jul 2023

Hyderabad, India

- Designed responsive enterprise applications using Java, React, PostgreSQL, and AWS improving platform performance by 31% across distributed operational and customer-facing banking systems.
- Developed scalable backend services and RESTful APIs using Spring Boot, distributed workflows, and cloud-native architectures reducing operational bottlenecks by 24% across enterprise application environments.
- Optimized CI/CD pipelines, automated deployments, and version control workflows using Docker, Kubernetes, and Jenkins accelerating software delivery efficiency by 26% while improving production scalability and stability.
- Collaborated with cross-functional engineering teams to support Agile development, implement maintainable backend architecture, and deliver scalable banking workflow automation solutions.

Software Engineer

Systems Technology Group

Oct 2021 – Jul 2022

Chennai, India

- Developed backend services and distributed applications using Java, SQL Server, and REST APIs improving workflow processing efficiency by 21% across enterprise operational systems and applications.
- Integrated enterprise applications with database reporting systems, metadata management workflows, and distributed backend services reducing infrastructure bottlenecks by 18% while supporting scalable software platforms.
- Enhanced debugging, automated testing, and deployment automation workflows using Jenkins, Git, and Linux environments improving application reliability by 17% across enterprise software environments and services.
- Partnered with engineering teams to implement maintainable backend logic, scalable APIs, and secure distributed software solutions supporting enterprise modernization initiatives.

Associate Software Engineer

Virtusa

Jun 2019 – Sep 2021

Chennai, India

- Built enterprise application modules using Java, SQL, HTML, and JavaScript improving application usability by 16% across distributed operational and customer workflow systems.

- Developed RESTful APIs and database-driven integrations using PostgreSQL and Spring Framework reducing manual processing inefficiencies by 15% while supporting scalable enterprise communication workflows.
- Implemented unit testing, debugging, and Git-based deployment workflows improving code quality by 14% while supporting maintainable software engineering and Agile development practices.
- Assisted senior developers with GUI enhancements, file management processes, and scalable software implementations supporting enterprise application delivery initiatives.

TECHNICAL SKILLS

Programming Languages: Java,Python

Frameworks & Libraries : Spring Boot, Spring MVC, Hibernate, Spring AOP, Dependency Injection, React,Angular,Multithreading

Backend: REST APIs, SOAP APIs, GraphQL, Microservices Architecture, Azure API, OAuth 2.0,OWASP,API Development

Cloud & DevOps: AWS (S3, Lambda, IAM,EC2), kafka, Jenkins, Logging,Terraform

Frontend: HTML5, CSS3, Responsive Design, State Management, JSP,Jquery,AJAX,Vue.js,Next.js

Databases: Oracle DB,PostgreSQL, MySQL, SQL Server, Oracle, MongoDB

Testing: JUnit, TestNG, Mockito, Selenium, Cypress, Playwright, Jest, Postman,JMeter,cucumber,Selenium

AI Development Tools : Claude Code, Gemini, AI-Assisted Debugging, AI Workflow Automation, AI Agents

Architecture and Tools: Distributed Systems, Event-Driven Architecture, Serverless Architecture, SaaS Platforms, Design Patterns (Singleton, Factory, Observer),Github

Relevant Coursework: Cloud Computing, Application Development Analytics, Project Management, Data Visualization, Advanced Database Management Systems

PROJECTS

Music Streaming Platform Development | *React.js, Spring Boot, AWS, MySQL* Aug 2024 – Nov 2024

- Built a full-stack music streaming platform with React.js frontend, Spring Boot backend, and MySQL database, delivering secure and scalable media services.
- Implemented JWT authentication, REST APIs, and AWS S3 integration for secure streaming, playlist management, and scalable media storage.
- Deployed containerized services on AWS EC2 and optimized API performance, reducing playback latency and enabling seamless multi-device access.

Enterprise Management System | *C#, .NET Core, SQL Server* Aug 2023 – Dec 2023

- Built a modular management system for employees, projects, and roles using C# and .NET Core with SQL Server backend.
- Implemented REST APIs with robust role-based access control (RBAC) and authentication mechanisms, enabling secure and scalable interactions.
- Designed relational database schemas and enforced data integrity through constraints and validation rules.
